

A LEVEL CHEMISTRY INDEPENDENT STUDY

- Make sure you use the specification! Check through each topics using revision guide or notes (plenty available - chemrevise.org is a good resource) and make your own, brief notes or cards.
- Complete questions on a topic - do a few, check and correct answers, note points to work on. You can re-do questions we have done in class or for tests or use physicsandmathstutor.com website for sets of past exam questions grouped in topics.
- Study your weak points and get more help if needed - chemguide.co.uk, E Rintoul and Allery Tutors YouTube channels are recommended by students.
- Do another set of questions.
- Don't give up - keep **DOING** / correcting / working on weaknesses - don't JUST read.
- Let us know SPECIFICALLY which areas you need help with and we will plan accordingly.
