Heartlands Community Trust is looking to raise money for The Grove, a specialist school for children and young people with autism in North London. The building refurbishments are progressing but additional funding is needed to improve upon the sensory rooms, soft play areas and for other items of equipment to provide the best possible environment for pupils to achieve their full potential. Access to these world class facilities will enable pupils to learn about, and cope with the difficulties that life can throw at them.

There are many ways we are doing this: applying to grant giving trusts and foundations, working with parents, engaging with the local community and businesses, asking our Heartlands High School students to fundraise exclusively for The Grove, and by approaching corporations and individuals, but to succeed we need help from them all and you.

Listed are the specific areas and amounts we are fundraising for:

<table>
<thead>
<tr>
<th>Area</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sensory Room</td>
<td>£24,000</td>
</tr>
<tr>
<td>Soft Play Area</td>
<td>£18,000</td>

A Sensory Room is a specially designed room which combines a range of stimuli to help individuals develop and engage their senses. These can include lights, colours, sounds, sensory soft play objects, aromas all within a safe environment that allows the person using it to explore and interact without risk.

Sensory Rooms can help those who have learning difficulties, developmental disabilities or sensory impairments learn to interact with the world around them, but in a safe environment that builds up their confidence and ability. This freedom lets their teacher, therapist or carer see what calms them, rouses them and what they like or don’t.

**BENEFITS OF A SENSORY ROOM**

**Sensory Stimulation**
By encouraging the user to engage and explore the environment then it can have positive effects on their ability to react and interact with the larger world around them.

**Enhance Learning Through Play**
Following on from this, sensory stimulation can engage different areas of the brain, helping children absorb and retain more information and better meeting the needs of the individual.

**Improve Balance, Movement and Spatial Orientation**
Sensory rooms can help develop users’ visual processing abilities as well as their fine and gross motor skills, facilitating day-to-day living.

**Tackle Problems with Wellbeing and Behaviour**
Sensory environments can be highly absorbing, providing a moment of comfort and calm for overactive and distressed individuals, and helping inactive individuals to feel better engaged. This improves focus and prevents users from getting the urge to ‘act up’.

Sensory soft play refers to activities that stimulate our senses, including our sense of balance (vestibular) and our awareness of our own body and our surroundings (proprioception). For children with sensory difficulties, soft play areas can be tailored to their specific needs with the inclusion of either superactive or calming sensory equipment. Sensory soft play areas provide a safe and fun environment for young children to interact and develop essential life skills.

SOCIAL SKILLS

Older kids often love to hang out on soft cushions and interact with one another. For some, social skills develop naturally, and for others, a motivator or safe place is needed.

SECURITY

Security is another advantage of soft play for kids. When in a safe, sensory space, children can feel more secure within themselves. This can encourage movements and interactions which ordinarily might prove to be a challenge. As they become more confident, these skills can then be transferred into the outside world.

CREATIVITY

One of the many benefits of soft play is how it can nurture and encourage creativity. Children can interact in a positive way, really engaging their brain.

MOTOR SKILLS

Soft play encourages motor development such as stepping, climbing, crawling, jumping and rolling without fear of injury. With movement can come speech and language skills as well as education.

In the case of autism, an occupational therapist works to develop skills for handwriting, fine motor skills and daily living skills. Therefore, the aim of sensory integration therapy is to improve the ability of the brain to process sensory information so that the child will function better in his/her daily activities.

Spending time in a sensory room helps children to develop sensory skills that they will need later in life. The stimulating and calm atmosphere, created in these specially equipped rooms, enhances coordination and helps children improve their ability to communicate and regulate their emotions and arousal levels.

Many people with autism are challenged by sensory processing, that means they find it difficult to interpret the information they receive from their environment and make sense of it. Specialist equipment such as swings enable the OT to work with the child to integrate their senses and the way in which they interact and interpret the environment around them.

SENSEORY INTEGRATION & OT

Outdoor Gym, play equipment and Trampolines provide much needed experiences for children with autism to regulate their arousal levels and work on both their vestibular and proprioceptive senses. That is, their balance and body awareness.

Physical activity focuses on developing core strength as many of our young people may have dyspraxia or difficulties with both fine and gross motor skills. As well as enhancing opportunities to develop our PE curriculum and promote healthy living and well being, outdoor learning also provides valuable play skills and communication opportunities.

BALANCE AND STRENGTH
Water play can help improve children’s balance and strength. Playing in water allows for a whole new sensory experience. Water also adds resistance so water play activities work as strength training.

COORDINATION
Play and practicing any movements using water helps to develop coordination.

COMMUNICATION AND SOCIAL SKILLS
Water play allows children to explore and interact with each other offering a great opportunity to encourage communication and social development.

EXPLORATION AND LEARNING
Bodies of water offer endless opportunity for physical experiments and discoveries and how it interacts with objects and our bodies.

CALMNESS
Water is a calming activity that can reduce stress and anxiety. For many of our autistic learners, the chance to play in water can be built into their daily routines to offer much needed opportunities for ‘therapeutic’ work and interventions.

KEY FEATURES
• Area at the entrance where towels can be hung. Shelves/hooks for storing buckets
• Long troughs with quirky taps to play with
• Wall mounted tap by the window for filling buckets.
• Kneipp hose pipe on the wall with a limiter on it so water does not spray everywhere in an extreme way.
• Water fans, body jets, waterfall and water curve – controlled by the simple push buttons.

How do you join a conversation with friends or initiate an interaction with them? What do you say when someone greets you and you don’t know them? Is it appropriate to tell your teacher about your interest in trains during a lesson? What does it mean when someone pulls a face at you but doesn’t say anything?

Our lives are full of subtle and complicated social skills and whilst most children naturally learn these, for young people with autism this can be one of the greatest challenges they may face as they learn to navigate the complexities of people and those ‘unspoken rules’.

A large focus at The Grove is providing experiences and opportunities to develop an understanding of how the social world works. One of those approaches is through drama and performance where our pupils not only develop these skills but also learn to build their confidence, self esteem, learn how to work alongside others and build relationships.

Because gathering social information is an integral part of drama and performance, pupils learn how to recognise subtle social cues and stimuli rather than rely on learnt ‘scripts’. Drama and performance develops flexible thinking and responses by challenging what is often a concrete thinking style, giving a safe space for pupils to learn how to predict the right responses to tricky situations that may happen.

As Shakespeare said, ‘All the world’s a stage, and all the men and women merely players.’ By having access to high quality facilities and experiences, we will help our autistic learners to be more confident in understanding the social complexities of the world in which we live whilst also developing confidence, resilience and self belief in themselves.
